

How to plan the purchase of your septic system In 4 easy steps

1 Site & soil evaluation to obtain plans and specifications

Contact a technologist or an engineer to obtain plans and specifications* (description of your lot, topography of the site, slope of the land, level of permeability, etc.).

For references in your area, contact us by e-mail: pte@premiertech.com
or by phone at 1 800 632-6356.

*Depending on local regulations.

2 Obtaining a permit

Submit the plans and specifications from the technologist or engineer to the inspector for your municipality.

3 Installing the system

Request estimates from various contractors trained by Premier Tech Environnement. The installer will provide all necessary components (septic tank, effluent system, Ecoflo[®], clean crushed stone for the absorption bed, pumping station if needed, etc.).

For references in your area, contact us by e-mail: pte@premiertech.com
or by phone at 1800 632-6356..

4 Making a compliance inspection

The municipal inspector or some other mandated person will go on site and inspect the installer's work at various stages to ensure compliance. Once the installation has been completed, your installer will give you an envelope with your owner's manual and maintenance agreement. Make sure that you fill out your maintenance agreement as soon as possible and send copies of it to the people concerned. By doing so, you will ensure that your Ecoflo[®] is recorded in our database and that an agent makes the preventive maintenance visit included in the purchase price of your system.
