

Why choose Ecoflo®

Tangible value for your property

Compact

Ecoflo® gives you more space! Compared with conventional treatment systems, it takes up two to four times less space. And since the lid is the only visible part, Ecoflo® also preserves your landscaping.

Flexible

Ecoflo® is the ideal solution for new projects or faulty systems that need to be replaced. The Ecoflo® is designed for use in both main and secondary dwellings.

Versatile

Can be installed on all types of lots even places where it is impossible to infiltrate the water in the soil. (impermeable, clayey or rocky soils, low groundwater table and steep slope lots).

Permanent

The strength of the Ecoflo® resides in using natural, quality-controlled filter that retain pollutants until their degradation. Ecoflo® is a permanent system that does not require any relocation of reconstruction. Only the filter needs replacing.

Passive

The Ecoflo® filter does not require any power to treat wastewater. Therefore, the system remains operational even during power outage.

Safe

Ecoflo® offers a superior protection. Indeed, using a filter such as peat moss ensures that no particle exits the system and damages the septic installation. The Ecoflo® septic installation that meets regulations can retain up to 98% of the phosphorus contained in domestic wastewater. The Ecoflo® technology is the best solution for the long-term protection of lakes, watercourses and groundwater, as well as the preservation of property values.

Proven

Ecoflo® is the most recommended, installed, and proven compact wastewater treatment system on the market. Its performances in the various certification tests that it has undergone have always exceeded certification requirements. Therefore, it comes as no surprise that over 40,000 families have chosen this system in the last 15 years!

Certified

American Certification

BMEC

Ontario Certification

Quebec Certification

European Certification

Ecoflo® systems are installed by contractors who have a thorough knowledge of all Ecoflo® components thanks to the training sessions that we offer. In addition, these contractors must be aware of all the relevant standards so that their installations comply with local regulations.

Maintained

Annual maintenance is an essential step in the effective functioning of the Ecoflo®. An inspection of the system must be performed every year throughout the lifetime of the system. That is why, when you purchase an Ecoflo® septic system, a preventive maintenance visit is included in the purchase price.
